PROFESSIONAL SUMMARY

Master's student in Data Science (GPA 3.9) with hands-on experience cleaning, integrating, and visualizing multi-source datasets in Python, R, and SQL. Proven record of turning inconsistent, messy data into standardized, decision-ready outputs for nonprofit and research stakeholders. Navy veteran with a track record of independent, high-accountability work in remote and high-pressure environments.

TECHNICAL SKILLS

- Languages & Tools: Python, R, SQL, PostgreSQL, Git, Excel
- Data Libraries: Pandas, NumPy, GeoPandas, Matplotlib, ggplot2, sf (R)
- Analysis: Data cleaning & integration, geospatial analysis, statistical modeling, reproducible pipelines

EXPERIENCE

Data Team Intern — Oregon Department of Administrative Services *June 2026 – Present*

- Currently building and maintaining a centralized data catalog for the agency's data team, working through a full inventory of enterprise datasets to improve discoverability.
- Working alongside a small data team on early-stage pipeline components, with the goal of reducing manual handling of source data for downstream analysis.
- Applying structured metadata and validation standards to cataloged datasets, receiving positive feedback from the data team on accuracy and pace of work to date.

Data Analyst (Service Learning Internship) — Nonprofit Partners, Camarillo, CA *2023 – 2024*

- Cut manual data-cleaning time for two nonprofit partners by building standardized Python/R scripts to process inconsistent housing and agriculture datasets.
- Helped leadership act on findings without follow-up clarification by translating statistical trends into plain-language reports and presentations for non-technical stakeholders.
- Surfaced key operational trends for two separate organizations by structuring and analyzing multi-year program data and delivering actionable insights.

Construction Electrician — United States Navy *2014 – 2019*

- Maintained full regulatory compliance across assigned projects, with zero non-conformance findings in unit inspections, by keeping detailed technical documentation and process tracking.
- Delivered on-time completion of assigned installations under quality-assurance review by supervising and coordinating small technical teams.
- Kept complex electrical systems running reliably, reflected in consistently high pass rates on maintenance checks, by independently diagnosing and resolving faults using structured troubleshooting methods.

SELECTED PROJECTS

Global Energy & Conflict Analysis (Python, R)

- Built a unified, comparable dataset across three mismatched sources (World Bank, EIA, UCDP) by standardizing identifiers and designing a reproducible cleaning pipeline, eliminating country-name/format conflicts.

EDUCATION

Master of Science, Data Science — Willamette University | Current GPA: 3.9

Relevant Coursework: Data Visualization (incl. geospatial mapping in R), Statistical Modeling, Machine Learning, Data Wrangling

Bachelor of Arts, Economics — California State University, Channel Islands
